

STUDY TOOL

A Smart Web Application for Efficient Learning

Team Project

Technologies: HTML | CSS | JavaScript

V. TEJASREE

B.TEACH AI&ML student | Project Lead

Introduction

Introduction

- Study Tool is a smart web-based learning application designed to help students study more effectively by transforming traditional study materials into interactive resources .
- Students use many textbooks and PDF for study. Reading full materials is time-consuming. This project extracts the main information to help in quick revision.

Problem statement

Students commonly face challenges such as:

- Managing large volumes of study material
- Identifying key concepts quickly
- Revising efficiently before exams
- Testing their understanding
- Tracking academic progress
- Traditional learning methods often lack interactivity and consume more time.

Objectives

- ☒ Key Points
- ☒ Short Notes
- ☒ Quick Review

Objective

The major objectives of this project are :

- To Identify important concepts
- To Extract key points from textbooks and PDFs
- To Create short notes and questions
- To Save time during exam preparation
- TO reduce study time
- To enhance knowledge retention

METHODOLOGY

The Study Tool was developed using **HTML, CSS, and JavaScript** to create a responsive and interactive web application with a clean dashboard interface.

The methodology involved analyzing student requirements, designing user-friendly modules such as

- document upload
 - summarization
 - quiz and flashcards
- and then implementing these features step by step. Finally, the system was tested to ensure smooth functionality, accuracy, and an effective learning experience for users.

Example

Database Basics

Functional Dependency

Define Functional
Dependency?

EXAMPLE

Suppose, a student upload a textbook into study tool and the system quickly generates a short Summary:-

- chapter : database basics
- Key point : relationship between attributes, attributes are columns, tuples are rows.
- Main topic: functional dependency

Flashcards: these are created for revision purpose

Quizzes: help the student test their understanding. This makes studying faster, more organized

Tools & Resources

- **HTML, CSS, and JavaScript:**
Used to design and develop the structure, user interface, and interactive features of the Study Tool web application.
- **Web Browser (Chrome/Edge):**
Utilized for testing the application to ensure responsiveness and smooth performance.
- **Visual Studio Code (VS Code):**
Served as the primary code editor for writing, debugging, and managing the project files efficiently.

Advantages

Save
Time

Better
Understanding

Easy
Revision

Well
Organized

Advantages

- Make Easy and quick revision
- Improves productivity
- Saves study time
- Beginner-friendly interface
- Supports multiple file formats
- Well-organized materials

Conclusion

This project helps students focus on important topics by converting large study materials into Short and makes understand the topics exam preparation easier.
